SUMMARY

Cloud DevOps Engineer with **3+ years of experience** designing, deploying, automating, and managing scalable **cloud infrastructure and applications on AWS**. Hands-on experience with **Kubernetes, Docker, Jenkins CI/CD, Terraform, and Istio**, with a strong focus on cloud-native deployments, infrastructure automation, and reliable release processes. Proficient in **Linux-based environments, AWS networking, monitoring, and multi-region architectures**, with experience improving deployment efficiency, system reliability, and operational scalability. Skilled in collaborating across development, infrastructure, and operations teams to deliver **secure, highly available, and production-ready solutions**.

EXPERIENCE

Think Analytics – Cloud DevOps Engineer

Mar 2025 – Current

Project: Core Project Team

- Delivered cloud-native deployment solutions for **20+ enterprise customers**, developing and deploying applications across **AWS** environments while collaborating with cross-functional teams to ensure reliable and scalable releases. Transformed 100+ static **CloudFormation scripts** into modular **Terraform** code, cutting provisioning time by 60%.
- Migrated traditionally deployed services to **containerized Kubernetes workloads**, implementing automated deployment, failover, scaling, and **multi-layer security** across staging and production environments. Transformed 100+ static **CloudFormation scripts** into modular **Terraform** code, cutting provisioning time by 60%.
- Designed an **AI-based predictive scaling architecture** to dynamically optimize infrastructure capacity based on application usage patterns, with a projected **~15% reduction in infrastructure costs** during peak workloads. Transformed 100+ static **CloudFormation scripts** into modular **Terraform** code, cutting provisioning time by 60%.
- Developed and deployed **feature enhancements for multiple customers** in production environments, coordinating application changes, configuration updates, testing, and release activities to improve deployment efficiency.
- Automated and optimized **system health monitoring and AWS CloudWatch configurations**, implementing proactive alerting and infrastructure capacity improvements across compute, disk, and memory resources.
- Streamlined **Terraform-based infrastructure deployments**, reducing manual provisioning and configuration activities by **40%** and improving consistency across environments.
- Worked with **AWS, Kubernetes, Terraform, CloudWatch, and containerized application environments** to build, deploy, monitor, and maintain scalable cloud infrastructure.

Avis Budget Group – Cloud COE Engineer

Oct 2023 – Feb 2025

Projects: Fleet Data Platform & Customer Data Platform

- Orchestrated critical workflows including service lifecycle management via **Jump Box** and automatic secret key rotation, eliminating **~15 hrs/week** of manual coordination with development teams.
- Transformed 100+ static **CloudFormation scripts** into modular **Terraform** code, cutting provisioning time by 60%.
- Engineered Jenkins pipelines integrating **Terraform and CloudFormation**, automating manual AWS operations and reducing execution time by 70%.

Multi-Region Deployment (Complete Ownership)

- Created automated **deployment scripts**, achieving a 90% reduction in setup time.
- Rolled out and maintained **Kubernetes clusters** across two AWS regions, boosting service redundancy and cutting downtime risk by 40%.
- Implemented **access control, failover, and outlier detection policies**, improving system reliability by 35%. Migrated ingress from **Istio to Gloo Mesh Route Table**, optimizing cross-region traffic flow.

Cognizant – Programmer Analyst Trainee

Mar 2023 – Oct 2023

Project: Digital Dashboard Transformation (Client: Otsuka Pharmaceuticals)

- Migrated large datasets into **Tableau** using optimized **SQL** queries, improving **data integrity** and cutting migration errors by 20%.
- Validated and enhanced **Tableau** dashboards, achieving 100% **visualization** accuracy and reducing reporting errors by 30%.

Cognizant – Data Warehousing Intern

Mar 2022 – Jun 2022

- Built **PySpark, Hive, and Hadoop** workflows, enhancing data processing efficiency by 25%.
- Executed **ETL** pipelines with **Informatica**, streamlining data workflows, reducing load time by 30%.
- Authored 50+ shell scripts and 150+ **SQL/Python/NumPy/Pandas** solutions, improving data analysis throughput by 40%.

TECHNICAL SKILLS

- Cloud & DevOps: AWS, Kubernetes, Istio, Gloo Mesh, Terraform, Docker, Jenkins, Concourse, ArgoCD
- Monitoring & CI/CD: CloudWatch, Postman
- Programming & Scripting: Python, Shell, SQL, HTML/CSS, Web Scraping (BeautifulSoup)
- Data & Analytics: Hadoop, Hive, PySpark, Informatica PowerCenter, Tableau, Pandas, NumPy

PROJECTS

Book Info Application

- Provisioned secure **AWS** infrastructure (**VPC, subnets, routing, SGs, EC2**) using **Terraform**, ensuring compliance-ready deployments.
- Implemented **Istio-based** Book Info application on EC2, showcasing full-cycle deployment and service mesh implementation.

Movie Review Model

- Scraped and stored 5,000+ IMDb movie records using **BeautifulSoup and SQL**, enabling large-scale data analysis.
- Cleansed datasets with **Python/NumPy/Pandas** and built **Tableau** dashboards, elevating insights quality by 40%.
- Trained **RandomForest regression** model with **Scikit-Learn**, achieving 96% prediction accuracy on 5,000+ IMDb reviews.

EDUCATION

Bachelors of Technology (July 2018 – July 2022) Heritage Institute of Technology, Kolkata (8 CGPA)

CERTIFICATIONS & ACHIEVEMENTS

- AWS Cloud Practitioner certified.
- Gold Badge in Python & SQL – HackerRank
